

iPhone/iPad is doubtlessly one of the most ideal platforms for developing all types of mobile applications. Our courses here at Rajadhani Institute of Engineering and Technology help you in developing user-friendly, highly precise, and interactive apps based on the unique needs of the customers. With ample amount of experience in developing applications for iPhones/iPads, the trained students who complete our course will be a promising asset to any company which hires them. With our innovative ideas and our resourceful training, you will never have to stand back in the line.

## What will you learn ?

### *The Studies*

The course is designed to convert fresh hand students to industry standard developers and bring them quickly up to speed with Objective-C and iOS development.

## How will I benefit?

### *Benefits from R.I.E.T*

On completion of this course you'll be able to,

- ▶ Develop in Objective-C
- ▶ Build your own iOS apps for iPhone, iPad & iPad.
- ▶ Get a head-start in getting your app onto the App store.
- ▶ Get all your queries and doubts answered during the class itself.
- ▶ Learn iPhone development through hands-on programming tutorials.
- ▶ Get to know all the tips, tricks and time saving coding techniques.

## You will learn

- How to build iOS applications for iPhone, iPod Touch and iPad.
- Everything you need to know about Objective-C to develop iOS apps.
- How to use Xcode, Interface Builder, Instruments and the iOS Simulator.
- Detailed understanding of how the iOS SDK works.
- How to deploy your app to a real device and the provisioning process.
- Full details on the submission process and essential tips to get your app into the app store.

## Eligibility for this course

### *Your qualifications*

Our iPhone training program is appropriate for beginners. If you have prior knowledge of C or any other Object Oriented Language like Python, Ruby on Rails, Java or C# it will make learning that much easier. Budding programmers need not feel nervous as our detailed and patient training classes ensure that you are completely comfortable with a particular topic before moving on to the next one.

## Certification

### *Your achievements*

On completion of your course and successful development of the iPhone application assigned to you, you will be certified as iPhone Apps Developer by Apple Authorised Training Centre (AATCe), R.I.E.T.

Course Duration

*7 Days.*

Starts from 2016 June 20 to 28

Course Fee

*Rs 5000/-*
