ABOUT THE PROGRAM

Energy conservation and Power Quality issues are complement to each other. For example, loads used to conserve energy like variable frequency drives and efficient lights with electronic ballasts, in most cases affect power quality. This dilemma will be answered in this course, where the issue between energy conservations and power quality will be expounded and explained. The causes, effects and solutions and more importantly how these solutions can generate savings will be addressed. Therefore, the main objective of this short term course is to give a solid understanding of Energy & Power Quality Audit methodologies in industrial/commercial/residential facilities.
